SUMMARY

Computer Science student specializing in full-stack web development, with hands-on experience building production websites and CMS platforms using React, Next.js, TypeScript, AWS, and modern frontend technologies. Experienced working with clients and development teams to design, implement, and maintain scalable web applications.

PROFESSIONAL EXPERIENCE

trACT Software | Full Stack Developer Intern

May 2026 – Present

- Audited the existing website for SEO, performance, navigation, and responsive design issues, implementing improvements across the site.
- Migrated and rebuilt the **9-page marketing website** from Wix using **React, Next.js, JavaScript, and Tailwind CSS**, incorporating updated Figma designs, graphics, and animations.
- Built a **2-page account management dashboard** supporting profile updates, password changes, and permission-based email invitations.
- Designed a **13-collection Payload CMS** architecture, enabling content updates without code changes.
- Built a consistent data-fetching architecture using **Next.js Server Actions** and Payload's Local API, avoiding HTTP requests from client components.
- Implemented **React Context** for responsive rendering and blog state management, supporting incremental loading of blog posts.
- Replaced Wix analytics with a custom dashboard integrating **Microsoft Clarity, Google Analytics, and Google Search Console**.
- Built a daily analytics pipeline using **cron and Amazon S3** to collect and store data while working around external service rate limits.
- Designed **AWS RDS and S3** storage to replace Wix infrastructure and leverage the client's existing AWS environment, targeting elimination of the Wix subscription.
- Implemented an invitation workflow with **Amazon SES** to support permission-based account invitations, generating and delivering email invites for new dashboard users.
- Worked directly with the client through biweekly standups and feedback to translate requirements into website, CMS, analytics, and infrastructure solutions.

3D Western | Full Stack Developer

May 2026 – Present

- Helped rebuild an **8-page marketing website** using React, Next.js, TypeScript, Tailwind CSS, and Radix UI, focusing on CMS integration and testing.
- Designed an **18-collection Payload CMS**, replacing hardcoded content and enabling non-technical staff to manage site content without code changes.
- Implemented **collection-level permissions** so administrators can control which content each user can create or edit.
- Built a **config-driven Payload data layer** that generates reusable fetch methods and reduces duplicated API code when adding collections.
- Used React Context and **SWR caching** to load blogs, projects, and events on demand while avoiding redundant requests.
- Automated Instagram content ingestion with a **daily cron job and Meta API**, syncing account data and the 10 latest posts into Payload.
- Refactored legacy components and project structure by removing unused files, reducing duplication, and reorganizing TypeScript types.

Childcan (Tethos) | Senior Frontend Developer

October 2025 – March 2026

- Co-led frontend development on a **7-person team**, building complex React features and supporting 5 junior developers.
- Built a reusable **typed content-rendering system** used across 10+ pages to standardize structured content.

- Designed **slug-based dynamic routing** for family stories and events to support scalable CMS-backed pages.
- Built the responsive header and frontend for a **fuzzy-search system** across a 20+ page website.
- Collaborated in Figma to improve **accessibility, navigation, and discoverability**, including clearer donation pathways.
- Helped rebuild a **20+ page Squarespace site** using React, Next.js, TypeScript, and Tailwind CSS before the project transitioned to Webflow.

MarketDental | Frontend Developer

July 2025 – August 2025

- Rebuilt an outdated employee punch-in interface using **Svelte, JavaScript, and Tailwind CSS**, improving mobile responsiveness and usability.
- Integrated **GET and POST API requests** for employee status, punch-in/out actions, employee data, and interface settings.
- Built a responsive employee table showing punch-in times, offices, and positions, with filtering and optimized print support.
- Used **Svelte stores** to reuse fetched data and reduce unnecessary API requests across components.
- Worked directly with the client through design feedback and iteration before deploying the new interface for internal use.
- Built reusable Svelte components and loading states to keep the frontend maintainable and responsive.

PROJECTS

Home Server

Linux | Docker | Caddy | Tailscale

- Repurposed an old PC into an **Ubuntu Server** for self-hosting web applications, services, and development tools.
- Containerized web applications and services with **Docker**, creating custom images and isolated containers for each workload.
- Configured **Caddy as a reverse proxy** to route traffic to containerized services and provide HTTP/HTTPS access over ports 80 and 443.
- Built a shared **Docker network** for internal container communication while limiting externally exposed services.
- Deployed a self-hosted remote notes vault alongside web applications as independently managed containers.
- Configured **Tailscale** for secure remote access to the server from personal devices without directly exposing administrative services.

Portfolio Website | [Website](#) | [Source Code](#)

Figma | Vite | React | Typescript | Tailwind CSS

- Designed and built a desktop-inspired portfolio from scratch using **React, TypeScript, Vite, and Tailwind CSS**
- Built a custom **Hyprrland-inspired window manager** using React Context, reducers, and tree-based state to open, focus, minimize, and close windows
- Managed global state for themes, windows, filesystem data, command history, and application focus through reusable React Context providers
- Built a desktop-style taskbar and search interface for finding and opening projects
- Created a responsive mobile experience that adapts the desktop model to a single-window, scrollable application layout
- Currently developing an interactive terminal supporting portfolio navigation and a growing set of custom commands

SwingSync | [Source Code](#)

Java | Swing | Maven | Gradle

- Built a Java developer utility that **hot-reloads Swing interfaces** without restarting the application.
- Used **Java Reflection and custom ClassLoaders** to detect code changes, rebuild components, and replace the active UI at runtime.
- Implemented file watching to monitor compiled classes and automatically trigger UI reloads during development.
- Designed a simple API requiring only a JFrame, root JPanel, and constructor parameters to enable hot reloading.

- Published SwingSync on **JitPack** for easy integration through Maven and Gradle.

Party Islands | [Source Code](#)

Java | Swing | Maven

- Co-led development on a **5-person team** building a real-time multiplayer typing game with Java Swing.
- Built **UDP broadcast and discovery** for LAN multiplayer, allowing players to scan for, advertise, and join available lobbies.
- Designed an **EventBus-based window manager** that decoupled 10+ screens and standardized static and dynamic screen transitions.
- Implemented the login, lobby, waiting-room, and player interfaces using reusable Swing components.
- Developed and tested the project through requirements, UML design, implementation, and testing as part of the full software development lifecycle.

Throwback | [Website](#)

Framer

- Designed a social app concept for reconnecting university students with old friends based on shared schools and locations.
- Collaborated on ideation, user personas, wireframes, and a high-fidelity interactive prototype during a **24-hour design sprint**.
- Helped build a Framer presentation site showcasing the design process, user flows, persona, and final prototype.
- Presented the product to judges at an event with approximately **150 participants**, contributing to the team winning **Most Accessible Design**.

ADDITIONAL EXPERIENCE

The Wave | Bartender/Waiter

September 2025 – Present

- Bartend events of up to **700+ guests**, preparing cocktails, draft beer, and service-bar orders while handling high sales volume.
- Serve up to **7 tables at once** during high-volume shifts, including lunch periods serving 100+ guests in roughly two hours.
- Open and close the bar, restock inventory, prepare garnishes, manage takeout orders, and maintain accurate incident records.
- Process cash, debit, and credit transactions through POS systems, including end-of-shift cashouts and till balancing.
- Coordinate with **~10 front-of-house staff and managers** to manage large tables, reservations, modified orders, and service flow.
- Apply responsible alcohol service practices and accommodate dietary restrictions and allergies when serving guests.
- Progressed from host to bartender and became a trusted team member for high-responsibility tasks and busy events.

EDUCATION

Western University

Expected May 2028

BSc Computer Science, Minor in Software Engineering

GPA: 3.95 | Dean's Honor List | Hugh White Scholarship | Award of Excellence

Relevant Coursework: Software Engineering, Data Structures & Algorithms, Systems Programming

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Java, Python, C, Bash, SQL

Technologies: React, Next.js, Svelte, Tailwind CSS, Payload CMS, PostgreSQL, Supabase

Tools: Git, GitHub, GitLab, Figma

Cloud & DevOps: AWS (EC2, S3, SES, RDS), Vercel, Docker, Nginx, Caddy, Linux
